

SARRAZIN

SARRAZIN, PROTECTION IN ACTION FOR MORE THAN 50 YEARS

A family company founded in 1958, Sarrazin is recognised for its expertise and professionalism in the design and manufacture of protective cabins for industry, hazardous outside works and other specific applications. For nearly 30 years, Sarrazin has also been developing armour-plating and ballistic protection solutions for civilian and military vehicles.

SARRAZIN, A CERTIFIED MANUFACTURER FOR YOUR SAFETY

Quality and reliability: the two mainstays of protecting people and equipment. It is by setting a high standard that Sarrazin is able to guarantee all its customers requirements and more in ballistic protection solutions. The quality policy established on the Sarrazin production site has been rewarded with many certifications: ISO 9001, ISO 14001 and AQAP 2110.

SARRAZIN, A 15 YEARS EXPERIENCE IN ON-BOARD BALLISTIC PROTECTION SOLUTIONS

Missions and works in worldwide sensitive areas require specific equipment to get full safety mobility. Existing armour-plating solutions for civilian vehicles are expensive and require sending vehicles back to the factory for protection upgrade and modifications. These operations generate delay and significant costs. SARRAZIN, thanks to a long experience and close partnership within the French Army Services, offers you a quality alternative, an express and economical armour-plating solution : the removable ballistic protection kit for the Toyota Land Cruiser LC Series 100 and 105.

- Perfect fitting: new or used vehicles equipped without drilling, without welding, without any modification.
- Quick delivery: your kit will reach you directly on site, anywhere in the world.
- Easy mounting: 2 workers during 2 days only, using universal assembly instructions (pictures only, no text).
- Full customization: short or long protection version according to your choice.
- Complete reversibility: after protection removal, vehicle is restored to its original condition.

Removable ballistic protection kit

No DRILLING No WELDING
Fitting without vehicle modifications

NATO B6
Stanag 4569
Level 1

WINDSCREEN PROTECTION

Attached to the original mounting points, it provides very good visibility with enhanced safety.

ENGINE ASSEMBLY PROTECTION

Bonnet, engine block, radiator, batteries, controller, interior wings, engine bulkhead and vehicle vital components are protected.

SIDE PROTECTION

The external appearance of the bodywork is unchanged. Protective armour, attached to the original mounting points, covers the whole of the door surface area. Armoured plate glasses allow permanent outside visibility for driver and passengers. With tinted original glasses or by adding tinted solar film, the ballistic kit will remain invisible.

ROOF PROTECTION

Roof protection is available in two versions: external or internal under the roof panel.

REAR PROTECTION

In the long version, the luggage compartment is protected. A glazed armour-plated door provides rear access. In the short version, an armoured bulkhead including a glazed armour-plating is fixed behind the passengers' rear seat.

FLOOR PROTECTION

Bolted on two side-members (themselves attached to the original chassis mountings), the explosion-resistant floor protects the passengers against anti-personnel mines or grenades.

ADVICE FROM SARRAZIN:

Once you have installed the removable protection kit on your vehicle, why don't you also raise the chassis by fitting special shock absorbers and run-flat tyres. Contact us.
